

Dermatologic Polymerase Chain Reaction (PCR) Testing

Why wait days for a bacterial panel and weeks for fungal culture results?

Ipsum Diagnostics can get your test results to you in less than 24 hours.

Real-time PCR utilizes highly specific assays for rapid, accurate profiling of polymicrobial infections. Let Ipsum provide your practice with quicker turn-around time for more effective treatment and superior patient care.

The advantages of PCR over traditional culture is unambiguous results that assist you with making all-important treatment decisions:

- Faster, more accurate and precise results
- Increased sensitivity and less prone to cross-contamination
- Rapid results help minimize morbidity and reduce costs
- DNA is extracted even on your most fragile specimens regardless of the viability of the swab

Ipsum's proprietary ePrecision© process ensures reliable results backed by science. Our DNA extraction techniques provide testing for multiple pathogens types (bacterial and fungal) on a single swab. In addition, Ipsum offers our providers Comprehensive Consultation Services by Infectious Disease

Specialists to review test results for clinical significance. Ipsum offers "Smart Report Results" with clinical data like:

- Presence of pathogenic organisms and sensitivities
- Targeted medications
- Medication allergies
- Health conditions, age and more
- Streamlined Results using a Single Report
- Multiple panels (bacterial and fungal) can be provided on a customizable single report
- Delivering integrated enhanced reporting
- Full clinical picture all in one place
- Simplifies the clinical decision process making it more efficient for you and your staff to provide your patients timely treatment

COMING SOON: Viral, mycobacterial and Deep Fungal Panels
