

Dermatologic Polymerase Chain Reaction (PCR) Testing

Why wait days for a bacterial panel and weeks for fungal culture results?

Ipsum Diagnostics can get your test results to you in less than 48 hours.

Real-time PCR utilizes highly specific assays for rapid, accurate profiling of polymicrobial infections. Let Ipsum provide your practice with quicker turn-around times for more effective treatment and superior patient care.

Advantages of PCR vs traditional culture that assist you with making all-important treatment decisions:

- Quick, accurate and precise results
- Rapid results help minimize morbidity and reduce costs
- DNA is extracted even on your most fragile specimens and regardless of the viability of the swab reducing risk

Ipsum's proprietary process ensures reliable results backed by science. Our DNA extraction techniques provide testing for multiple pathogens types (bacteria AND fungus) on a "single swab".

Ipsum offers "Smart Report Results" with clinical data like:

- Presence of pathogenic organisms and sensitivities
- Targeted medications
- Medication allergies
- Health conditions, age and more Streamlined Results using a "Single Report"
- Multiple panels can be provided on a customizable single report
- Delivering integrated enhanced reporting
- Full clinical picture all in one place
- Simplifies the clinical decision process making it more efficient for you and your staff to provide your patients timely treatment

COMING SOON: Onychomycosis, Deep Fungal and Rare/Tropical Disease Panels
